Certification Statements:

1. The animal(s) were raised and separated from any other animals susceptible to rabies at a facility (Place of Origin) since birth or for at least 6 months prior to shipping. The facility that the animal(s) were raised in is registered in accordance with the relevant regulations of USDA and approved by the Republic of Korea. The facilities operates animal health programs for regularly monitoring animal disease and under a veterinary supervision and has no abnormality at the inspection by USDA and maintained the documentation about species, the number of animals, the origin of country or capture area, the date of introduction of new animals and history of disease outbreaks, medication, clinical inspection, rabies neutralizing antibody titre test, etc.

2. There have been no outbreaks of tuberculosis for 2 years; and rabies and pest for 1 year at the facility where the animal was raised.

3. The animal(s) were isolated (at the listed Place of Origin) for at least 30 days for export quarantine by a government veterinary officer at a quarantine facility designated by the U.S. government. The animals were not in contact with any animals except for those that are also intent for export to Korea once the export quarantine was initiated, and none of the quarantined animals showed any clinical signs of contagious diseases during the isolation period. The isolation stated on _____ and was maintained until arrival in Korea.

4. The animal(s) were treated with a medicine effective for endo/ecto-parasites at least twice, with 2 week intervals, with the last treatment given within the 5 days prior to shipping. Treatment medication (product name): _____ Treatment method: _____ Treatment dates (2 listed): _____

5. The animal(s) were examined by a USDA accredited veterinarian prior to entry into isolation and prior to issuing the health certificate. The animal(s) will be examined by a USDA accredited veterinarian within 48 hours of departure, and will show no signs of livestock contagious diseases, including rabies, prior to departure or the animals will not be exported.

6. Crates, vehicles, and the stowage area of vessel/aircraft used for transportation of animals, as well as the export quarantine facility, are disinfected using a disinfectant approved by the U.S. government.

7. The animal(s) for export are transported in a safe manner that prevents contamination by any communicable animal disease pathogens to the port of embarkation and to Korea without coming in contact with any other animals.

8. All hay, bedding, and fodder supplied for the animal(s) during transportation are sanitary and are not known to be contaminated with any communicable animal disease pathogens. No additional material will be added after departure.
